London

April 16th

Imperial College London

The Grid is the next generation of distributed computing and can be used by any discipline for almost any task. We are offering a chance to learn about the Grid, how to use the Grid infrastructure and help to get you working on the Grid.

Starting with presentations, Q&A sessions and discussion sessions in the morning, in the afternoon we will explore using the Grid in a real situation.

More details and online registration can be found at
